IMPORTANT TO CUSTOMERS

SEKO SYNERGY

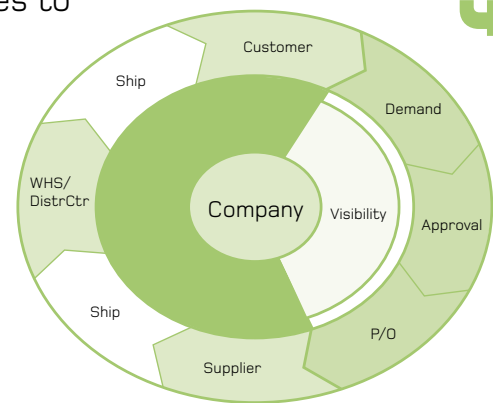

filling a black hole

Technology should make life easier and should also be simple to implement and to scale. Our software is able to meet all of these requirements as it has been designed and developed by our own programmers and written using Microsoft dot.net technology.

No two companies are the same. Each of our customers has a unique set of circumstances, business process and rules. But because our software is developed in-house, we are able to customise individual solutions for each client, meaning that it will always suit your unique business processes and address the individual supply chain issues which you face.

Our award-winning architecture is focused on key areas of the supply chain – and our leading-edge web-enabled management and execution tools will enable you to gain a holistic view of the total supply chain, from purchase order inception through to customer door delivery. Once installed, it delivers vastly improved visibility and takes away the 'black hole syndrome' that is so typical of many company's supply chains.

As soon as a purchase order is placed on a company that falls outside the customer enterprise, the 'black hole' appears. This hole can be filled when all of the elements and milestones of a typical shipment are available for the relevant parties to view using a common browser. Our software links these parties, via the web, to enable greater visibility and a fully cohesive supply chain.

IMPORTANT TO CUSTOMERS

upstream and downstream

Seko UK's unique software handles all elements of the inbound supply chain from purchase order inception through to distribution centre delivery – and then from distribution centre receipt through to fulfilment, outbound logistics and warehouse management.

upstream

- Simple 'to do' list function allows exception management of inbound supply chain
- Email integration
- Inbound pipeline management
- Drill down to purchase order, size, colour and style
- Custom reporting functions
- Fully interactive
- Critical path engine allows mapping of suggested supply chain against actual supply chain
- Analytics and reporting database
- Total flexibility in architecture allows system to be customised around your individual business processes

downstream

- Simple 'to do' list function allows exception management of inbound supply chain
- Dynamic interactive picking and packing planning
- Logistics Enterprise Resource Planning (LERP) system
- Stock management
- Warehouse management
- Documentation generator and management
- In-built APIs for easy integration

no two customers are the same

At Seko UK we have a different way of thinking and a different way of approaching the business issues faced by our customers. Our leading-edge web-based supply chain software has been developed in-house, allowing it to be tailored to meet the requirements of each individual client. This enables us to deliver a unique service offering and a truly customised solution, which will improve processes, reduce workloads and increase margin opportunity. Our key to success is attention to detail and being 100% focussed on customer service. So talk to Seko UK today – and find out how we can help you.

IMPORTANT TO CUSTOMERS

"Seko UK are the industry's leading provider of customer focused supply chain management solutions. Our driving motivation in everything we do is to see our customers succeed through our work together and for our employees to benefit from the company's success".
